| Notes | | | | | | | | | | | | |

User approved pedestrian interval to be less than phase max green.

User approved volume balancing among the lanes for turning movement.

* HCM 2010 computational engine requires equal clearance times for the phases crossing the barrier.

| Notes | | | | | | | | | | | | |

User approved pedestrian interval to be less than phase max green.

* HCM 2010 computational engine requires equal clearance times for the phases crossing the barrier.

| Notes | | | | | | | | |

User approved volume balancing among the lanes for turning movement.

* HCM 2010 computational engine requires equal clearance times for the phases crossing the barrier.

| Notes | | | | | | | | | | | | |

User approved pedestrian interval to be less than phase max green.

User approved volume balancing among the lanes for turning movement.

* HCM 2010 computational engine requires equal clearance times for the phases crossing the barrier.

| HCM 2010 LOS | | | A | | | | | |
| Notes | | | | | | | | |

User approved volume balancing among the lanes for turning movement.

* HCM 2010 computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Summary

| | |
|---------------------|------|
| HCM 2010 Ctrl Delay | 57.6 |
| HCM 2010 LOS | E |

Notes

User approved pedestrian interval to be less than phase max green.

User approved volume balancing among the lanes for turning movement.

* HCM 2010 computational engine requires equal clearance times for the phases crossing the barrier.

| Notes | | | | | | | | | | | | |

User approved pedestrian interval to be less than phase max green.

* HCM 2010 computational engine requires equal clearance times for the phases crossing the barrier.

| Notes | | | | | | | | |

User approved volume balancing among the lanes for turning movement.

* HCM 2010 computational engine requires equal clearance times for the phases crossing the barrier.

| Notes | | | | | | | | | | | | |

User approved pedestrian interval to be less than phase max green.

User approved volume balancing among the lanes for turning movement.

* HCM 2010 computational engine requires equal clearance times for the phases crossing the barrier.

| Notes | | | | | | | | |

User approved volume balancing among the lanes for turning movement.

* HCM 2010 computational engine requires equal clearance times for the phases crossing the barrier.

| Notes | | | | | | | | | | | | |

User approved pedestrian interval to be less than phase max green.

User approved volume balancing among the lanes for turning movement.

* HCM 2010 computational engine requires equal clearance times for the phases crossing the barrier.

**APPENDIX F: ASSOCIATION OF MONTEREY BAY AREA GOVERNMENTS
TRAVEL MODEL VALIDATION**

MEMORANDUM

Date: June 10, 2019

To: Anya Spear and Matt McCluney, California State University Monterey Bay
Steve Lohr and Dawn Theodora, California State University Office of the Chancellor
Ann Sansevero, Dudek

From: Bryan Esparza, Daniel Rubins, and Matt Haynes, Fehr & Peers

Subject: California State University Monterey Bay Master Plan EIR – AMBAG Model Review and Documentation

SJ17-1728

Fehr & Peers reviewed the Association of Bay Area Governments (AMBAG) regional travel model to evaluate its suitability for developing long-range traffic forecast for streets and highways within the greater Monterey Bay Area. Fehr & Peers reviewed the primary model inputs in the project area (such as base and future year land use inputs and roadway network assumptions) and also checked the performance of the model against typical validation thresholds. Modifications to the AMBAG regional travel model land use and transportation network inputs were completed to improve the validation of the daily, peak period and peak hour travel models. These changes to the AMBAG regional travel model are documented in this memorandum for application within the CSUMB study area.

REVIEW OF AMBAG REGIONAL TRAVEL MODEL INPUTS

The AMBAG regional travel model was fully updated in 2014, with minor updates incorporating more recent estimates of existing and future land uses per the Fort Ord Reuse Authority (FORA) travel model update completed in 2017. The AMBAG regional travel model as-received includes a 2010 base year and a 2035 future year. A screen capture of the 2010 base year model near the CSUMB campus and region wide is shown in **Attachments A** and **B**, respectively. The 2010 base year model contains freeways, arterials, and local streets within the Monterey County and the land use is summarized in traffic analysis zones. The model includes similar detail in the rest of the AMBAG region of Santa Cruz and San Benito counties. Fehr & Peers reviewed the street network coding including the number of lanes, vehicle speed, and vehicle capacity, and the land use in puts in the traffic analysis zones near the CSUMB campus.

The existing and future land use inputs are summarized into traffic analysis zones (TAZs). **Table 1** summarizes the as-received version of the land use inputs under existing and future years for the AMBAG regional travel model. The AMBAG regional travel model is based on the *2014 Regional Growth Forecast* (AMBAG, 2014) with land use projections for 2010 and 2035. The AMBAG base travel model (2010) includes social and demographic information from the 2010 Census (*Association of Monterey Bay Area Governments Regional Travel Demand Model Technical Report*, 2014).

TABLE 1: AMBAG Model Residential and Employment Land Uses

| Land Use Category | 2010 | | | 2035 | | |
|--------------------|-----------------|-------------------|-------------------|-----------------|-------------------|-------------------|
| | Monterey County | Santa Cruz County | San Benito County | Monterey County | Santa Cruz County | San Benito County |
| Residential | | | | | | |
| Total Households | 126,180 | 94,130 | 16,910 | 143,390 | 111,000 | 23,970 |
| Total Population | 385,050 | 246,240 | 54,400 | 444,080 | 292,790 | 75,830 |
| Employment | | | | | | |
| Agricultural | 45,100 | 9,600 | 1,600 | 48,670 | 10,230 | 1,500 |

Santa Cruz County TAZs in **Attachment N**

San Benito County TAZs in **Attachment O**

Based on summary of AMBAG TAZs ranging between 3 and 1839.

Source: AMBAG regional travel model.

The review and update of the AMBAG regional travel model involved several steps. The land use allocation for the base year (2010) model and future year was reviewed. The travel model land use changes from base year to future year (2035) models were updated to be consistent with the FORA version of the AMBAG model and adjacent city approved and pending project lists. All of these steps are described in more detail in the following sections of the memorandum.

MODEL VALIDATION GUIDELINES

The AMBAG regional travel model is one of the only tools available for estimating long-range traffic forecasts for streets and highways in the greater Monterey Bay area. The review and refinement of

the AMBAG regional travel model is intended to provide more accurate forecasts than are currently available for non-regional (i.e., local) streets in Marina, Salinas, and Seaside. Since it would be impossible for any travel forecasting model to precisely replicate all counts within a given roadway network, two-way morning peak hour, evening peak hour, and daily validation guidelines have been established by Caltrans and other agencies. These guidelines are meant to measure the travel model's relative performance in forecasting existing travel volumes as compared to existing counts while maintaining sensitivity to land use and roadway network changes. Key static validation standards for daily travel models based on Caltrans guidelines¹ are summarized below.

- At least 75 percent of the roadway links for which counts are available should be within the maximum desirable deviation, which ranges from approximately 13 to 68 percent depending on total roadway volume (the larger the volume, the less deviation is permitted).
- The correlation coefficient between the actual ground counts and the estimated traffic volumes should be greater than 88 percent.
- The Root Mean Square Error (RMSE) should not exceed 40 percent. This measure of effectiveness (MOE) is most important for screenlines, but is also used to describe the certainty of functional classification and volume ranges.

Although not stated in the Caltrans standards, additional Fehr & Peers validation guidelines were applied to the TDF model:

- The two-way sum of the volumes on all roadway links for which counts are available should be within 10 percent of the counts.
- All roadway screenlines should be within the maximum desirable deviation, which ranges from approximately 17 to 64 percent depending on total screenline volume.

INITIAL BASE MODEL RUN

We began with the base year (Year 2010) model provided by AMBAG. This as-is model represents the model as received from AMBAG, with no changes made. The initial sub-area validation results from this version of the model are presented in **Table 2** for daily and the morning and evening peak hours. The statistics show that while most of the measures are met, some are not.

The AMBAG model generates volumes for four time periods. These periods are the Morning Peak Period (6:00 to 9:00 AM), Midday Peak Period (9:00 AM to 4:00 PM), Evening Peak Period (4:00 to 7:00 PM), and Nighttime (7:00 PM to 6:00 AM). In order to convert these period volumes to peak hour volumes, Fehr & Peers used a peak period to peak hour factor of 0.51 for the morning peak

¹ Static Validation Criteria and Thresholds, *2017 California Regional Transportation Plan Guidelines*, California Transportation Commission, January 2017.

hour and 0.40 for the evening peak hour informed by the volume-to-count ratio of all the 2017 validation count locations. This is a similar method to how the AMBAG regional travel model converts peak period volumes to peak hour volume within the travel model.

Fehr & Peers collected traffic count data in between 2015 and 2017 specifically for the purpose of model validation of the roadways within the study area. These roadway counts were supplemented with annual monitoring counts from the Transportation Agency Monterey County (TAMC) for calibration of regional freeways and ramps.

As shown in **Table 2**, for each of the validation periods, some of the static validation statistics (i.e., percent of links within Caltrans deviation allowance and percent of screenlines within maximum deviation) are not met. And for the daily model results the volume-to-count ratio is not met. In addition to the model-wide statistics, the detailed results by Functional Classification, Volume Range, Two-Way Total Traffic Volume, and Screenlines are attached **Attachment C, D, E** and **F**.

Table 2: SUB-AREA TDF MODEL STATIC VALIDATION SUMMARY (RUN 00)

| Validation Item | Threshold | AM Peak Hour | PM Peak Hour | Daily |
|--|----------------------------------|--------------|--------------|-------------|
| Summary Statistics | | | | |
| Local Street Count Locations | N/A | 40 | 40 | 40 |
| Freeway and Ramp Count Locations | N/A | 10 | 10 | 10 |
| Model/Count Ratio | N/A | 1.00 | 1.00 | 0.87 |
| Static Validation Statistics | | | | |
| Percent of Links Within Caltrans Deviation Allowance = | At Least 75% | 48% | 42% | 54% |
| Correlation Coefficient = | At Least 0.88 | 0.98 | 0.98 | 0.99 |
| Percent Root Mean Square Error (RMSE) = | Below 40% | 32% | 32% | 26% |
| Volume-to-Count Ratio (Sum of all Locations) = | Within ±10% | 0 | 0 | -13% |
| Percent of Screenlines Within Maximum Deviation = | 100% of links between 17% to 64% | 80% | 65% | 79% |

Notes:

1. **Bold text** indicates model validation meets guidelines.

Source: Fehr & Peers, 2019.

In general, the base year model overestimated volumes on most freeway facilities in the project area for the daily, AM peak hour, and PM peak hour model runs. The local roadways were generally underestimated for each time period too.

BASE MODEL INPUT ADJUSTMENTS

To improve model validation, adjustments were made to several model components, including the roadway network inputs and CSUMB campus trip generation. These changes are described below and include land use and population changes, as well as roadway network changes.

BASE MODEL LAND USE CHANGES

Based on information received from CSUMB staff and comparing land uses in the model to aerials of Existing Conditions, land use and population adjustments were made to the as-is Existing Conditions TDF model (Run 00). These edits are presented in **Table 3**.

TABLE 3: BASE MODEL LAND USE CHANGES

| TAZ | Jurisdiction | Description of Edit |

BASE MODEL ROADWAY NETWORK CHANGES

Roadway network edits were made to improve model validation, improve consistency with local traffic counts, and more accurately represent existing roadways within the study area. These changes are presented on **Table 4**.

TABLE 4: BASE MODEL ROADWAY NETWORK CHANGES

| Facility Type | Attribute Edited | Description |
|-----------------|------------------|--|
| Roadway Network | Road Expansion | Changed Imjin Parkway from Reservation Road to Imjin Road to be a 2-lane minor arterial. |
| Roadway Network | Road Expansion | Changed Imjin Parkway from Imjin Road to Highway 1 to be a 4-lane minor arterial. |
| Roadway Network | Speed Increase | Increase speed on Del Monte Boulevard from Reservation Road to Marina Green Road from 35 miles per hour (mph) to 40 mph. |
| Roadway Network | Bike Class | Adjust bicycle facility type on Imjin Road from Imjin Road to Reservation Parkway to Bike Class II. |
| Roadway Network | Node | Adjust centroid connector placement from node 3568 to node 37011. |
| Roadway Network | Node | Adjust centroid connector placement from node 8071 to node 37004. |
| Roadway Network | Node | Adjust centroid connector placement from node 33033 to node 37006. |
| Roadway Network | Node | Adjust centroid connector placement from node 33036 to node 37005. |
| Roadway Network | Node | Adjust centroid connector placement from node 33034 to node 37007. |
| Roadway Network | Node | Adjust centroid connector placement from node 3087 to node 37008. |
| Roadway Network | Node | Adjust centroid connector placement from node 3190 to node 37009. |
| Roadway Network | Node | Adjust centroid connector placement from node 2672 to node 37010. |
| Roadway Network | Functional Class | Changed from Local Road to Transit Only Link on Divarty Street between Engineer Lane and 4 th Street to reflect existing limited access conditions. |
| Roadway Network | Functional Class | Changed from Local Road to Transit Only Link on 6 th Avenue between A Street and B Street to reflect existing limited access conditions. |

Source: Fehr & Peers, 2019.

CSUMB CAMPUS TRIP GENERATION CHANGES

The Existing Conditions external trip generation for the CSUMB campus described in the *California State University Monterey Bay Master Plan EIR – Trip Generation Evaluation Methods and Estimates* memorandum is implemented by factoring the morning and evening peak hour vehicle trip matrices for the traffic analysis zones 806, 826, 847, 908, and 913.

UPDATED BASE MODEL RUN (RUN 01) VALIDATION RESULTS

By making adjustments described in the previous sections, the model performance was slightly improved for each time period. The revised base year model sub-area validation results classified by Functional Class Volume Range, Two-Way Total Traffic Volume, and Screenlines are attached (see **Attachments G, H, I and J**), and are referred to as Run 01, which includes daily, AM and PM peak hour. For all time periods the amount of two-way roadway model to count volume ratios within deviation increased. Validation results by functional class for both the PM peak hour and Daily show increase number of RSME values within deviation. AM peak hour and Daily have more screenlines within deviation. The model validation results for the updated base model given in **Table 5** presents the validation results for all validation locations regardless of functional class or volume.

ABLE 5: SUB-AREA TDF MODEL STATIC VALIDATION SUMMARY (Run 01)

| Validation Item | Threshold | AM Peak Hour | PM Peak Hour | Daily |
|--|----------------------------------|--------------|--------------|-------------|
| Summary Statistics | | | | |
| Local Street Count Locations | N/A | 40 | 40 | 40 |
| Freeway and Ramp Count Locations | N/A | 10 | 10 | 10 |
| Model/Count Ratio | N/A | 1.02 | 1.02 | 0.88 |
| Static Validation Statistics | | | | |
| Percent of Links Within Caltrans Deviation Allowance = | At Least 75% | <u>48%</u> | <u>48%</u> | <u>58%</u> |
| Correlation Coefficient = | At Least 0.88 | 0.98 | 0.98 | 0.99 |
| Percent Root Mean Square Error (RMSE) = | Below 40% | 34% | 35% | 24% |
| Volume-to-Count Ratio (Sum of all Locations) = | Within ±10% | 2% | 2% | <u>-11%</u> |
| Percent of Screenlines Within Maximum Deviation = | 100% of links between 17% to 64% | <u>75%</u> | 85% | 79% |

Notes:

1. **Bold text** indicates model validation meet guidelines.
 2. Underlined text indicates model validation results improved from Run 00.
- Source Fehr & Peers, 2019

For each of the validation periods, some of the static validation statistics (i.e., percent of links within Caltrans deviation allowance and percent of screenlines within maximum deviation) are not met; however, the results do show improvement compared to Run 00. Percent root mean square error is still below the 40% threshold and has shown further improvement in Run 01. Similar to the Run 00 results, the revised base year TDF model (Run 01) overestimated volumes on most freeway/expressway facilities in the Marina area for the daily, AM peak hour, and PM peak hour model runs. The local roadways were generally underestimated for the three time periods.

Fehr & Peers was able to improve the validation and reduce the overall error in the model for street and highway segments within the study area. Therefore, this updated Association of Bay Area Governments (AMBAG) regional travel model is the best tool available for developing long-range traffic forecast for streets and highways within the greater Monterey Bay Area.

FUTURE YEAR MODEL INPUT ADJUSTMENTS

The future year (Year 2035) model was provided by AMBAG. This as-is model represents the model as received from AMBAG, with no changes made. Fehr & Peers updated and added land use and roadway coding according to the Regional Transportation Plan (RTP) planned and funded street improvements planned by the Fort Ord Reuse Authority (FORA), City of Marina, and the AMBAG Regional Transportation Plan (RTP). The future year model update incorporates land use and network changes per the (FORA) travel model update completed in 2017. Fehr & Peers also adjusted the external trip generation for the CSUMB campus to represent future conditions.

FUTURE MODEL LAND USE CHANGES

Land use and population refinements were made based on information received from CSUMB staff and comparing land uses in the model to other models including the FORA AMBAG regional travel model. **Table 6** presents these changes.

TABLE 6: FUTURE YEAR MODEL LAND USE CHANGES

| TAZ | Jurisdiction | Description |
|--|--------------------|--|
| 826 | Marina | <ul style="list-style-type: none"> Add 508 K-12 Student Enrollment |

FUTURE YEAR ROADWAY NETWORK CHANGES

The future year transportation network includes the planned and funded street improvements planned by the Fort Ord Reuse Authority (FORA), City of Marina, and the AMBAG Regional Transportation Plan (RTP) (see **Attachment K** and **L** for a description of the Cumulative without Project Conditions transportation improvements list). **Table 7** summarizes the roadway network edits to the 2035 roadway network near the study area.

TABLE 7: FUTURE YEAR MODEL ROADWAY NETWORK CORRECTIONS

| Attributes Edited | Description |
|------------------------------|---|
| Road Classification/Speed | Changed Eastside Parkway classification from a Local Road to a Minor Arterial with posted speeds of 45 mph from the end of the existing Eucalyptus Road to Inter Garrison Road. |
| Road Addition | Add Watkins Gate Road to the model from Sloat Street to Reservation Road. Classification is coded in as a local road with two lanes. |
| Road Expansion | Changed Imjin Parkway from Reservation Road to Highway 1 from a Local Road classification to a 4-lane Minor Arterial with a posted speed of 40 mph. |
| Road Classification/Speed | Changed Lightfighter Drive from Highway 1 SB Ramps to General Jim Moore Boulevard from a Local Roadway to a Principal Arterial with a posted speed of 40 mph. |
| Road Expansion | Widened 2 nd Avenue between Lightfighter Drive to Imjin Parkway to four lanes. |
| Bike Facility Classification | Change Bike Lane Facility to Class II on Imjin Parkway from Imjin Road to 2nd Avenue. |
| Bike Facility Classification | Change Bike Lane Facility to Class II on Giggling Road from 6th Division Road to General Jim Moore Boulevard. |
| Bike Facility Classification | Change Bike Lane Facility to Class II on General Jim Moore Boulevard from Giggling Road to Inter-Garrison Road. |
| Bike Facility Classification | Change Bike Lane Facility to Class III on A Street from 7th Avenue to Divarty Street. |
| Bike Facility Classification | Change Bike Lane Facility to Class III on Divarty Street from General Jim Moore Boulevard to 5th Avenue. |
| Bike Facility Classification | Change Bike Lane Facility to Class I on Beach Range Road from 1st Street to Highway 1. |
| Node | Adjust centroid connector placement for node 39023 in order to correctly load volumes onto roadway network. |
| Node | Adjust centroid connector placement from node 33033 to node 39025. |
| Node | Adjust centroid connector placement from node 33036 to node 39024. |
| Node | Adjust centroid connector placement from node 33034 to node 39026. |
| Node | Adjust centroid connector placement from node 3087 to node 39027. |
| Node | Adjust centroid connector placement from node 3190 to node 39028. |
| Node | Adjust centroid connector placement from node 2672 to node 39029. |
| Node | Adjust centroid connector placement from node 3568 to node 39030. |

TABLE K: CUMULATIVE WITHOUT PROJECT CONDITIONS ROADWAY IMPROVEMENTS

| Project Number ¹ | Name | Description | Sources ² | | | Included in Cumulative without Project Conditions? | Included in Cumulative without Project Conditions and Eastside Parkway? | Notes |
|---|--|--|----------------------|-------------------|------------------|--|---|--|
| | | | City ³ | FORA ⁴ | RTP ⁵ | | | |
| City of Marina Capital Improvement Program | | | | | | | | |
| R 05 | Second Avenue Extension | Extend Second Avenue as a 2-lane arterial between Imjin Parkway and Reindollar Avenue | X | X | | Yes | Yes | |
| R 34 | Eighth Street | Upgrade/construct Eighth Street as a 2-lane arterial from Second Avenue to Inter-Garrison Road | X | X | | Yes | Yes | |
| R 37 | Patton Parkway Extension | Extension of Patton Parkway from Del Monte Boulevard to Crescent Street | X | X | | Yes | Yes | |
| R49 | Del Monte/Imjin Parkway & SR 1 Interchange | Construct new/consolidate interchange. On Caltrans Regional Transportation Improvement Program | X | | | No | No | Project is planned, funding projected between 2020 to 2035. Marina Capital Improvement Plan (CIP) describes project as being on the Caltrans Regional Transportation Improvement Program, though this improvement is not found in Caltrans State Transportation Improvement Program (2016) and Interregional Transportation Strategic Plan (2016). |
| R59 | Imjin Road Widening | Reconstruct and widen Imjin Road to four lanes from Imjin Parkway to Eighth Street | X | | | No | No | Project is planned, funding projected between 2020 and 2035. |
| R 61 | Second Avenue Widening | Widen Second Avenue from Tenth street to Inter-Garrison Road. Remove Class II bike lanes and restripe for two lanes each direction | X | | | Yes | Yes | Project is planned, funding projected between 2020 and 2035. |
| T 22 / T 23 | Imjin Parkway/SR 1 Improvements | Accommodate a second westbound left turn lane onto SR 1 southbound. Convert SR 1 southbound off-ramp to a loop ramp (or the functional equivalent). Widen SR 1 southbound on-ramp from 1 lane to 2 lanes | X | | | No | No | |
| Fort Ord Reuse Authority (FORA) | | | | | | | | |
| FO 6 | Inter-Garrison Road Widening | Widen Inter-Garrison Road to a 4-lane arterial from Eastside Parkway to Reservation Road | | X | | Yes | Yes | Partially completed between Sherman Blvd to Reservation Road |
| FO 7 | Gigling Road | Widen Gigling Road to a 4-lane arterial from General Jim Moore Boulevard to Future Eastside Parkway near Eighth Avenue | | X | | Yes | Yes | |
| FO 12 | Eucalyptus Road | Upgrade Eucalyptus Road to 2-lane collector from General Jim Moore Blvd to Eastside Parkway to Parker Flatts Cut-Off Road | | X | | No | Yes | Partially completed from General Jim Moore Boulevard to approx. 700 feet east of Parker Flatts Cut-Off Road. |

TABLE K: CUMULATIVE WITHOUT PROJECT CONDITIONS ROADWAY IMPROVEMENTS

| Project Number ¹ | Name | Description | Sources ² | | | Included in Cumulative without Project Conditions? | Included in Cumulative without Project Conditions and Eastside Parkway? | Notes |
|---|---|--|----------------------|-------------------|------------------|--|---|---|
| | | | City ³ | FORA ⁴ | RTP ⁵ | | | |
| FO 13B | Eastside Parkway | Construct new 2-lane arterial from Eucalyptus Road at Parker Flatts Cut-Off Road to Schoonover Drive | | X | | No | Yes | |
| AMBAG Regional Transportation Plan (RTP) | | | | | | | | |
| MON-MAR001-MA | Reservation Road Widening | Widen Reservation Road to 4 lanes between East Garrison Gate and Davis Road | | X | X | Yes | Yes | |
| MON-MAR001-MA | Imjin Parkway Widening | Widen Imjin Parkway to four lanes from Imjin Road to Reservation Road | X | | X | Yes | Yes | |
| MON-MAR115-MA | Imjin Parkway Widening | Widen Imjin Parkway from 4 lanes to 6 lanes and construct turning lanes at intersections between Second Avenue and Imjin Road. | X | | X | No | No | Described as obligatory in Marina 5 year Capital Improvement Plan (CIP), and as an unconstrained transportation project in the 2035 Metropolitan Transportation Plan / Sustainable Communities Strategy (2014). |
| MON-CT045-MA | SR 1/Monterey Road Interchange Improvements | New interchange at Monterey Road between Lightfighter Road interchange and the Fremont Boulevard Interchange | | X | X | No | No | All on- and off-ramps shown as diagonal ramps in Fort Ord Reuse Authority Fee Reallocation Study: Deficiency Analysis and Fee Reallocation (2017). |

Notes:

1. Project ID Number based on leading agency from source document.
2. Projects appearing in multiple source lists are described and denoted by source.
3. Listed in City of Marina's 5 Year Capital Improvement Project List, Revised March 2016.
4. Listed in Fort Ord Reuse Authority's Capital Improvement Program Fiscal Year 2017/18 through 2027/28, and Fort Ord Reuse Authority Fee Reallocation Study: Deficiency Analysis and Fee Reallocation (2017).
5. Listed in the 2035 Metropolitan Transportation Plan / Sustainable Communities Strategy (2014).

**APPENDIX G: VMT ANALYSIS FOR GREENHOUSE GASES AND VMT
FORECASTING OUTLINE**

VMT ANALYSIS FOR GREENHOUSE GASES

VMT ESTIMATION PROCESS FOR GHG ANALYSIS

Daily VMT estimates are used as an input into the air quality, noise and greenhouse gas (GHG) analyses. The process by which daily VMT is estimated for these uses is described below.

TOTAL VMT ACCOUNTING METHOD

The total VMT accounting method is often used as an input for the air quality and greenhouse gas analysis and is the method to be used in analyzing the Project's air quality, noise, and GHG analyses

Under the total VMT accounting method, vehicle trips are placed into three categories based on whether their origin and destination are internal or external to the geographic area in question. Trips that have an origin and a destination outside the area are not included in the VMT estimate under this method. Other trips are either wholly or partially included as described below:

- Internal-internal (II): The full length of all trips made entirely within the geographic area limits is counted.
- Internal-external (IX): The full length of trips with an origin within the geographic area and destination outside of the area is counted. This assumes that the geographic area bears all the responsibility for trips traveling to other areas.
- External-internal (XI): The full length of trips with an origin outside of the geographic area and destination within the area is counted. Similar to the IX trips, this assumes that the geographic area bears the full responsibility for trips traveling to it from other areas.

This "total accounting" method therefore captures the complete length of all trips that begin or end within the geographic area of study. This method is similar, but not identical, to the Project generated VMT estimation used for the SB 743 VMT assessment.

VMT ESTIMATES FOR GHG ANALYSIS

The results of the total VMT accounting methods are presented in **Table G-1**. This VMT is used for the GHG analysis.

The Existing and Existing with Project Conditions results support the concept that providing housing near jobs increases the likelihood that trips can remain within a local area, thus shortening travel distances and increasing residents' ability to accomplish some travel needs by walking, cycling, or using short-distance transit. The Cumulative with Project and without Eastside Parkway Conditions provide more housing near

jobs, which results in VMT per service population that is closer to that without the Project, with a difference of 0.1.

TABLE G-1: TOTAL VMT ACCOUNTING

| | Existing Conditions | Existing with Project Conditions | Cumulative Conditions | Cumulative with Project and without Eastside Parkway Conditions |
|---|----------------------------|---|------------------------------|--|
| CSUMB Campus | | | | |
| Vehicle Miles Traveled (A) ¹ | 160,800 | 279,400 | 162,400 | 297,800 |
| Service Population (B) ^{1,2} | 8,000 | 14,600 | 8,000 | 14,600 |
| VMT per Service Population (A/B = C) | 20.10 | 19.13 | 20.30 | 20.40 |

Notes:

1. Rounded service population and VMT to nearest 100.
2. Service population is defined as the sum of all employees, residents and students (K to University).

Source: Fehr & Peers, June 2019.

VMT Forecasting Outline Using the AMBAG Regional Travel Model

The AMBAG regional travel forecasting model was used to develop daily vehicle miles traveled (VMT) and traffic forecasts within the CSUMB campus and the Project study area. The travel forecasting model used for this analysis includes a 2017 base year, and a 2035 future year that reflect growth in the AMBAG region (Santa Cruz, Monterey and San Benito counties). The weekday daily model assignment is the sum of four time periods including: 1) morning peak period (6:00 to 9:00 AM), 2) mid-day peak period (9:00 AM to 4:00 PM), 3) evening peak period (4:00 to 7:00 PM), and 4) evening off-peak period (7:00 PM to 6:00 AM).

Fehr & Peers reviewed the Association of Bay Area Governments (AMBAG) regional travel model to evaluate its suitability for developing long-range traffic forecast for streets and highways within the greater Monterey Bay Area. Fehr & Peers reviewed the primary model inputs in the project area (such as base and future year land use inputs and roadway network assumptions) and also checked the performance of the model against typical validation thresholds. Modifications to the AMBAG regional travel model land use and transportation network inputs were completed to improve the validation of the daily, peak period and peak hour travel models. These changes to the AMBAG regional travel model are documented in a memorandum included in **Appendix F**.

The following steps were taken estimate the Project generated VMT and Project effect on VMT within specified geographic areas.

- Land Use Inputs: CSUMB transportation analysis (TAZ) land use inputs for base year and future year are summarized in **Table G-2**. The base and future land use by county is shown in **Table G-3**. The data dictionary for the land use codes is shown **Table G-4**. **Appendix F** also documents the land use changes.

TABLE G-2: CSUMB LAND USE CHANGES

| TAZ | Description of Edit |
|--------------------|---|
| Main Campus | |
| 806 | <ul style="list-style-type: none"> • Baseline University Enrollment is 2,322 • Project University Enrollment is 4,445 |
| 826 | <ul style="list-style-type: none"> • Baseline University Enrollment is 995 • Project University Enrollment is 1,905 |
| 847 | <ul style="list-style-type: none"> • Baseline University Enrollment is 3,317 • Project University Enrollment is 6,350 |
| East Campus | |
| 908 and 913 | <ul style="list-style-type: none"> • Baseline Students is 1,380 • Baseline Faculty, Staff and Community Partners is 743 • Project Students is 0 • Project Faculty, Staff, and Community Housing Partners is 1,220 |

Note: Land use added to the TAZs where the campus parking locations are located.

TABLE G-4: LAND USE CATEGORIES

| Attribute | Description | Unit |
|-----------------------|-------------------------|-----------|
| Population | Total population in TAZ | People |
| Households | Total households in TAZ | Household |
| Retail Employment | Retail trade | Job |
| Service Employment | Service trade | Job |
| Public Employment | Public trade | Job |
| University Enrollment | University students | Student |

Source: Fehr & Peers, 2019

- **Transportation Network Inputs:** The future year travel mode includes funded street improvements planned by the Fort Ord Reuse Authority (FORA), City of Marina, and the *2040 Metropolitan Transportation Plan / Sustainable Communities Strategy (2018)* as described in **Chapter 4** of the Transportation Analysis Report. The project specific transportation improvements are described in **Chapter 1** of the Transportation Analysis report. **Appendix F** also documents the network changes.
- **Campus Trip Generation Adjustments:** The AMBAG base and future models without and with the project were run. Each peak period vehicle trip matrix was adjusted using the Fratar method for the traffic analysis zones (TAZs) 802, 806, 826, 847, 908, and 913 to match the daily and peak hour

trip generation estimates presented in **Appendix A**. This method included factoring the morning and evening peak hour vehicle trip matrices until the trip generation from the CSUMB campus TAZs matched the estimated project trip generation values. A map showing TAZs for the CSUMB campus is shown in **Figure G-1**.

- **Project Generated VMT Estimation:** A select zone analysis was conducted for each geographic area (e.g., City, County or Region) to estimate Project generated VMT as specified in **Chapter 4**. The Project generated VMT was adjusted at the model edges to include the full length of trips that leave the AMBAG region (Santa Cruz County, Monterey County, and San Benito County). Adjacent jurisdictions (e.g., San Mateo County, Santa Clara County, Merced County, Fresno County, Kings County, and San Luis Obispo County) are represented by external stations or gateways where major roadways provide access into the overall model area. These stations capture the traffic entering, exiting, or passing through the model area on major county and state roadways (e.g. Highway 1, US 101, State Route 9, State Route 25, State Route 152, State Route 156, State Route 198, Skyline Boulevard, Frazier Lake Road, and San Felipe Road). To include VMT outside of the AMBAG region, the distances listed in **Table G-5** were used to estimate VMT for CSUMB campus or Monterey County trips occurring outside of the AMBAG region. The Project generated VMT metric for Monterey County is illustrated in **Figure G-2**.

TABLE G-5: EXTERNAL STATION DISTANCES

| External Station Location | Distance (miles) | Origin/Destination City ¹ |
|---------------------------|------------------|--------------------------------------|
| Highway 1 Northbound | 75 | Marin County |
| State Route 9 | 25 | San Jose |
| Skyline Boulevard | 20 | San Jose |
| State Route 152 | 40 | San Jose |
| US 101 Northbound | 40 | San Jose |
| State Route 25 | 40 | San Jose |
| Frazier Lake Road | 40 | San Jose |
| San Felipe Road | 40 | San Jose |
| State Route 156 | 75 | Merced |
| State Route 198 | 90 | Fresno |
| Highway 1 Southbound | 95 | Santa Maria |
| US 101 Southbound | 60 | Santa Maria |

Notes:

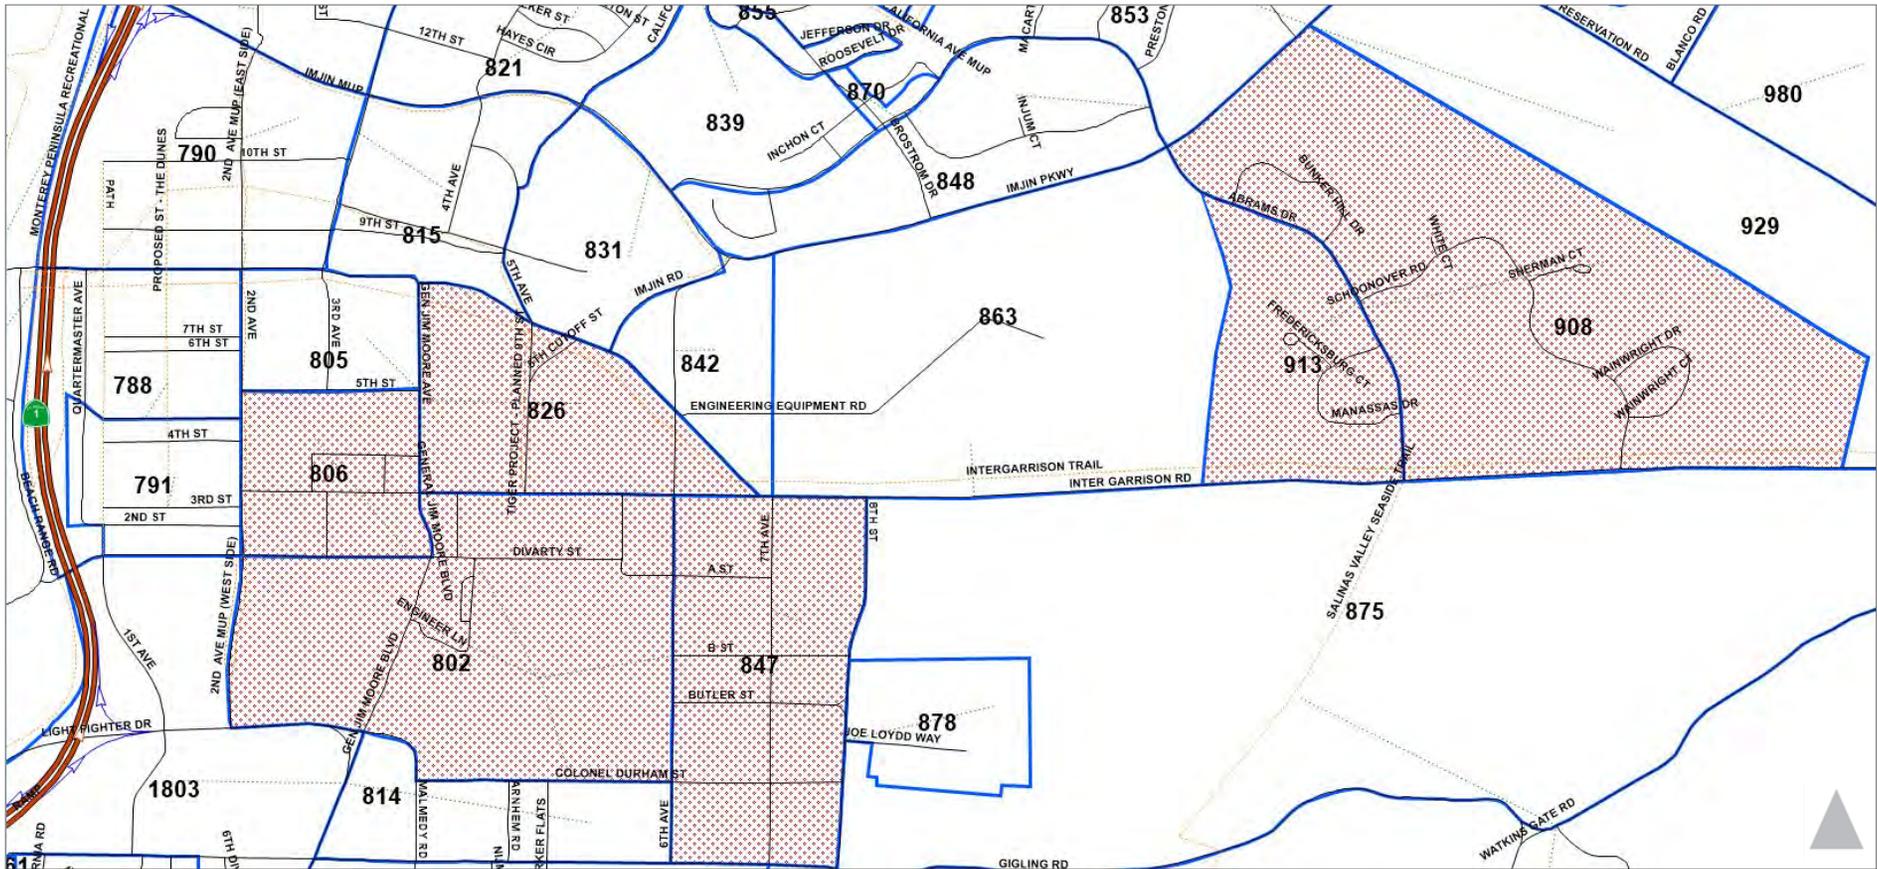

1. Distances measured from external station edge of AMBAG region to larger urban destination.

Source: Fehr & Peers, 2019

- **Project Effect on VMT (Boundary VMT):** As described in **Chapter 4**, the Project's effect on VMT, or cumulative impact, is evaluated using the boundary VMT, which captures all VMT on a roadway network within a specified geographic area, including local trips plus interregional travel that does not have an origin or destination within the area. The geographical boundary method only considers traffic within the physical limits of the selected study area and does not include the impact of vehicles once they travel outside the area limits. The use of boundary VMT is a more

complete evaluation of the potential effects of the project because it captures the combined effect of new VMT, shifting existing VMT to/from other neighborhoods, and/or shifts in existing traffic to alternate travel routes or modes. The Project generated VMT metric for Monterey County is illustrated in **Figure G-2**.

- VMT for Greenhouse Gas (GHG) Analysis (Total VMT Accounting): As described earlier in **Appendix G**, vehicle trips are placed into three categories based on whether their origin and destination are internal or external to the geographic area in question. Trips that have an origin and destination outside the area are not included in the VMT estimates under this method. The “total accounting” method therefore captures the complete length of all trips that begin or end within the geographic area to study.

 CSUMB Campus TAZs selected based on Parking Locations

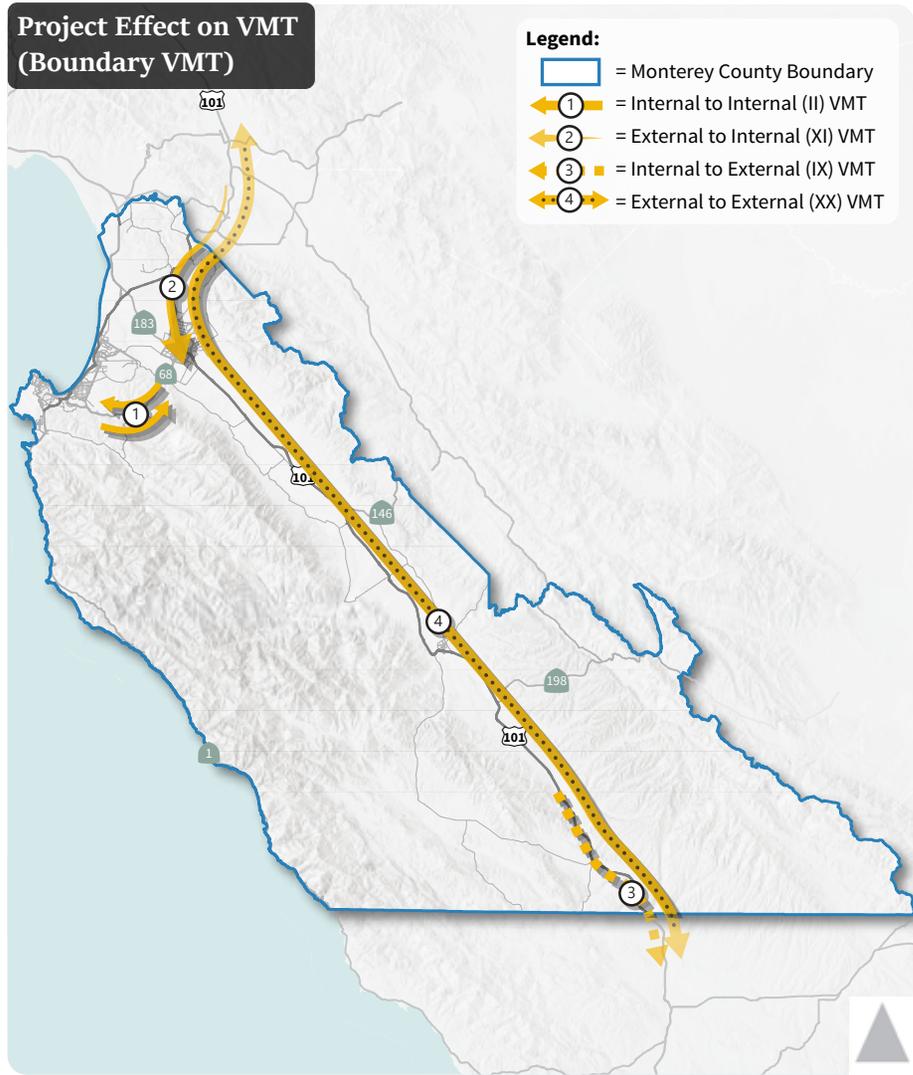

Figure G-1
TAZs used for CSUMB Campus

W:\Projects\SJ17_1728_CSUMB_Master_Plan_EIR\Graphics\GIS\WXDS\SJ17_1728_VMT_Basemap.mxd

Notes: External to External (XX) trips are excluded from this VMT metric. Adjustments to project generated VMT made to include the full length of trips that leave Monterey County to capture inter-regional travel.

Monterey County Boundary

Notes: Boundary VMT is all the VMT within Monterey County.

APPENDIX H: CSUMB DRAFT PARKING SUPPLY SCENARIOS

MEMORANDUM

Date: August 25, 2015
To: Philip Perlin, Page/BMS
From: Anais Schenk and Matt Haynes, Fehr & Peers
Subject: **CSUMB Draft Parking Supply Scenarios**

SJ15-1576

The following parking scenarios were developed for the California State University, Monterey Bay (CSUMB) Master Plan update planning process. CSUMB currently has the highest parking ratio in the CSU system at approximately 0.65 spaces per full time equivalent (FTE).¹ However, CSUMB stakeholders have expressed a strong desire to transition the campus from being mostly auto-oriented to a bicycle, pedestrian and transit friendly environment consistent with the Master Plan's sustainability goals. In order to help achieve this goal, the new Master Plan will seek to proactively manage campus parking supply and reduce the corresponding number of single occupancy vehicles entering campus.

As part of the Master Plan, the campus will also be considering new transportation demand management (TDM) measures as part of the overall effort to increase the use of alternative transportation modes. Currently, CSUMB offers a limited range of TDM measures such as rideshare matching services and resources for commuters wishing to use transit or bicycle to campus. While these TDM measures are responsive to the needs of commuters, the new Master Plan will need to include a broader and more comprehensive TDM program to improve transportation choices for students, staff and faculty.

In a campus setting, the most effective TDM measures relate to managing parking supply and pricing. The strategies presented below therefore seek to better manage both the supply and price of parking on the CSUMB campus.

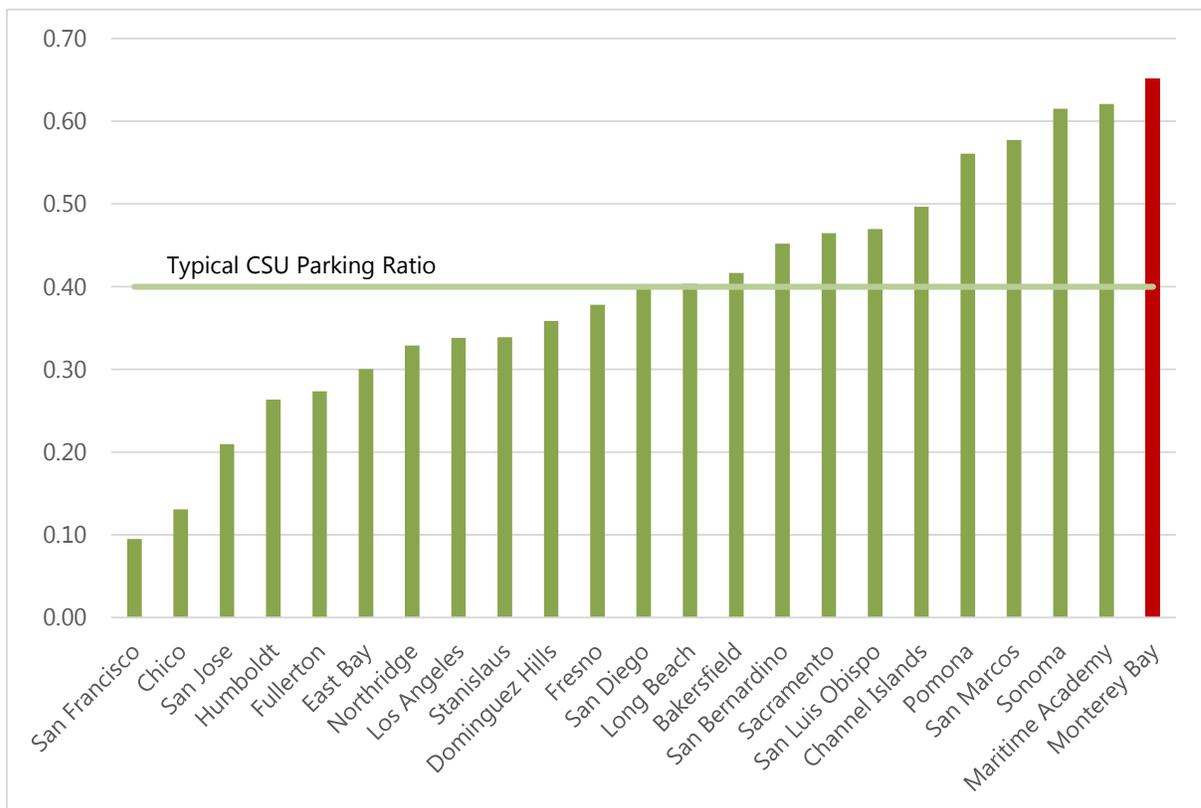

¹ The current CSUMB parking ratio varies from 0.6 to 0.7 depending on the source of information for full time equivalent students and the existing number of parking spaces.

PARKING SUPPLY ALTERNATIVES

Three parking scenarios are provided below for consideration in developing the land use program for the CSUMB Master Plan. The parking ratios are within the range of those achieved by other CSU campuses in suburban land use contexts. Cal State East Bay, Fullerton, Humboldt and Stanislaus all currently have parking ratios around 0.3 per FTE. CSUs that currently have a ratio close to 0.4 include Bakersfield, Fresno, Long Beach and San Diego. See **Figure 1** below.

Figure 1: CSU Parking Ratios per FTE

Source: California State University Financing and Treasury Department (July 2013) and California State University Analytic Studies (2013-2014).

Examples from other CSUs demonstrate that parking ratios between 0.3 and 0.4 are realistic and achievable within the context of suburban campus environments. **Table 1** below shows the results of three different parking ratios: 0.3, 0.35 and 0.4.

TABLE 1: PARKING SUPPLY SCENARIOS AT MASTER PLAN BUILDOUT¹

| Scenario | Parking Pricing Strategy ² | Parking Ratio per FTE | Residential Parking Supply | Non-Residential Parking Supply | Total Campus Stalls | Total Supply in Acres ³ |
|---|---|-----------------------|----------------------------|--------------------------------|---------------------|------------------------------------|
| Alternative 1: Aggressive Parking Management | High Cost with Tiered Pricing | 0.30 | 1,020 | 2,770 | 3,790 | 27 |
| Alternative 2: Moderate Parking Management | Moderate Cost with Limited Tiered Pricing | 0.35 | 1,650 | 2,770 | 4,420 | 32 |
| Alternative 3: Typical CSU Parking Supply | Moderate Cost (Comparable to Other CSUs) | 0.40 | 1,760 | 3,290 | 5,050 | 36 |

Notes:

1. The number of spaces shown are for stalls on campus (excluding East Campus) and do not include parking spaces provided by garages or driveways in campus faculty/staff housing.
 2. See Table 2 for details on pricing and corresponding strategies.
 3. The total number of acres was calculated assuming 140 parking spaces are accommodated in one acre for surface lots.
- Source: Fehr & Peers, 2015

The total number of parking stalls for each scenario were divided amongst residential and non-residential users based on the following assumptions:

- Population totals of 12,631 full time equivalent students and 1,421 staff/faculty positions as provided by Page/BMS.
- Sixty percent of students will be housed on campus.
- Campus housing for staff and faculty provides driveways or garages to house their vehicles.
- In addition to current on-campus housing for staff and faculty, we assume East Campus housing will be converted to staff and faculty housing.
- In order to achieve the Moderate and Aggressive parking alternatives, the Master Plan will need to incorporate a robust TDM program that achieves a 45-50 percent single occupancy vehicle mode share target along with a 10 percent rideshare mode share. The Typical CSU Parking Supply alternative will need to achieve an approximately 55 percent single occupancy vehicle mode share.

There are varying sources of information for existing parking spaces on the CSUMB campus. Current parking estimates range from 3,645² to 4,398.³ If the actual parking supply is on the higher end of this range of estimates than CSUMB may already have enough parking supply to accommodate either the aggressive or the moderate scenarios shown above. If CSUMB chose to adopt the aggressive scenario than new buildings could be constructed by removing surface lots without replacing lost parking stalls. An aggressive approach to managing campus parking supply, along with a robust TDM program, would therefore limit the amount of resources needed to construct additional surface parking during buildout of the Master Plan.

PARKING PRICING OPTIONS

There are several options for parking pricing that can be considered in conjunction with each parking supply scenario. These options are closely linked to the parking supply options presented above. For example, an aggressive parking supply alternative will also necessitate an aggressive approach to parking pricing.

Most CSUs charge for parking on a semester or quarter basis and have lower cost parking for evening and summer sessions when there is less overall demand for parking. CSUMB recently raised the price of parking permits to \$108 per semester for students and \$54 to \$58 per semester for employees. Current parking permit costs for other CSUs range anywhere from \$80 to over \$300 per semester. Some CSUs such as Chico, San Luis Obispo and San Jose charge more for on campus resident permits which discourage student auto ownership. Some universities offer location and time-based parking pricing such as MIT, UCLA and University of Colorado, Boulder. Because there are numerous ways to structure pricing to disincentivize driving the suggested pricing alternatives below are presented as ranges that would need to be refined as part of a future more detailed parking management and implementation strategy.

² California State University Financing and Treasury Department (July 2013). The ratio of 0.65 per FTE is from the CSU data as shown above in Figure 1.

³ California State University, Monterey Bay: Draft Parking Management Plan (2012).

TABLE 2: PARKING PRICING SCENARIOS PER SEMESTER

| Scenario | Parking Ratio per FTE | Range of Permit Cost (Student) | Range of Permit Cost (Staff/Faculty) | Pricing and Management Strategies |
|---|-----------------------|--------------------------------|--------------------------------------|--|
| Alternative 1: Aggressive Parking Management | 0.30 | \$425-500 | \$200-250 | <ul style="list-style-type: none"> • Higher prices for on-campus resident permits. • No vehicles for freshman on campus. • No on-campus permits for East Campus residents. • Tiered parking pricing based on distance to academic core. • Tiered pricing for limited days of week. (1 day, 2 days, etc.) • Increased citation costs. |
| Alternative 2: Moderate Parking Management | 0.35 | \$325-400 | \$150-200 | <ul style="list-style-type: none"> • Higher prices for on campus resident permits. • No vehicles for freshman on campus. • No on-campus permits for East Campus residents. • Tiered parking pricing based on distance to academic core. |
| Alternative 3: Typical CSU Parking Supply | 0.40 | \$200-250 | \$100-150 | <ul style="list-style-type: none"> • Higher prices for on campus resident permits. • No vehicles for freshman on campus. • Limited on-campus permits for East Campus residents. |

Source: Fehr & Peers, 2015

SUMMARY

Fehr & Peers has provided these preliminary parking ratios and pricing schemes in order to engage stakeholders and University staff in a conversation about a proactive approach to parking. Subsequent to Master Plan adoption, CSUMB should develop a Parking Management Plan to guide and implement campus wide parking policies including pricing, permitting and enforcement. This would be best achieved through a Transportation and Parking Services (TAPS) department which would be charged with implementing the parking management strategies and managing parking revenue. Under this structure, parking revenue could be directed towards transportation systems that reinforce the long term sustainable transportation goals of the campus.

APPENDIX I: PARKING DEMAND AND SUPPLY CALCULATIONS

TABLE 11: CSUMB EXISTING AND FUTURE ACADEMIC PARKING DEMAND AND SUPPLY

| Item | Value |
|---|----------------------|
| Existing Peak Parking Demand (A) | 2,396 spaces |
| Existing Students, Faculty and Staff Population (B) | 7,886 FTE |
| Existing Parking Demand Rate (A/B = C) | 0.313 spaces per FTE |
| Future Students, Faculty and Staff (D) | 14,476 FTE |
| Future Base Parking Demand (D x C = E) | 4,531 spaces |
| Circulation Factor (F) | 0.05 |
| Future Parking Supply (E x (1+F)=G) | 4,758 spaces |
| Existing Parking Supply | 3,730 spaces |
| Excess/Shortage Parking Supply | -1,028 spaces |

**APPENDIX J: CALIFORNIA STATE UNIVERSITY, MONTEREY BAY
HOUSING AND PARKING MANAGEMENT GUIDELINES**

Refer to Appendix C-2 of the CSUMB Master Plan EIR

California State University, Monterey Bay Housing and Transportation Demand Management Guideline

Introduction

The primary goals of this California State University, Monterey Bay (CSUMB) Housing and Transportation Demand Management (TDM) Guideline (Guideline) are to:

1. Insure that at least 60% of the student population lives on campus; and
2. Reduce vehicle traffic both on and off campus.

These goals will be met by implementing elements identified in the 2007 Campus Master Plan and TDM aspects of the associated Environmental Impact Report 2009 settlement agreement, the 2020 (draft) Campus Master Plan Guidelines, and an International Programs housing goal.

This Housing and TDM Requirement Guideline requires the following:

1. Freshman and sophomore students¹ are to live in on-campus housing.
2. 90% of International Program students² are to live in on-campus housing.
3. All freshman and sophomore on-campus residents³ are prohibited from parking or maintaining personal automobiles⁴ on campus, and purchasing parking permits.⁵

These measures will be implemented at a time determined by the President, based upon key milestones,⁶ and before 12,700 Full Time Equivalent Students are enrolled.

¹ **On-campus residency requirement exemptions** from this policy may include: living in the tri-county area prior to acceptance, marital, parental, military and health status. Exemption/waiver requests are reviewed on a case-by-case basis.

² **International Students** are full time undergraduate semester, year or degree seeking students. Not included within this directive are upper-division, graduate or students enrolled in extended education language programs.

³**Parking permit exception** - The following reasons will be considered for a parking waiver exception: 1) Economic need - when a student must rely on income from a job not served by public transportation; 2) Academic need - including off-campus service Learning, classes, research, or field study not served by public transportation; 3) Family need - i.e. continuing care of a sick or disabled immediate family member; 4) Frequent medical/dental appointments -whose location is not served by public transportation.

⁴ **Automobile** – Includes two in-line (motorcycle) or four-wheeled (car) automotive vehicle designed for passenger transportation.

⁵ **Parking permits** - Include all permit types

⁶ **Milestones** – Will be determined based on data indicating the campus' progress toward meeting its transportation and housing goals.

Directives and Rationale

1. Freshman and sophomore students will live on campus.

Rationale:

- **Precedent:** CSUMB has required full-time freshmen and sophomores to live on-campus since its inception in 1994 when the CSU acquired 1,253 East Campus Housing apartment style units and 1,811 beds on the Main Campus. This is consistent with research indicating that on-campus students are significantly more likely than their off-campus peers to succeed academically, to be involved in campus activities, to graduate, and to feel positive about their college experience. Furthermore, in 2018, the Monterey Bay Corporation passed a Student Housing policy⁷ which required full time freshmen and sophomores to live on-campus.
- **Master Plan goal to house 60% of students:** The last three versions of the campus Master Plan (2004, 2007, current draft) have included goals to house 60% of students on campus. The requirement takes advantage of a large housing stock, and adopted good planning practices to co-locate housing and jobs and school. As of the fall 2016 semester, approximately 60% of the enrolled 6,634 Full Time Equivalent Students resided in on-campus housing. As the campus continues to grow, this directive will maintain this percentage and will require commitment to ensure students remain a primary focus of future housing development.
- **Response to the housing crisis:** Providing on-campus housing reduces competition between students and residents for limited affordable housing. Furthermore, students coming to the Monterey Area from outside the area often have trouble finding off campus affordable housing.
- **TDM programs address transportation challenges** – Attending class while living on campus does not require car ownership. The campus currently provides, and is in the process of expanding, TDM programs (ex. car-share, scooter-share, universal transit access pass), which increasingly meet the mobility needs of those who cannot, or do not have the financial means or desire to own a car. Therefore, living on campus is a car-free option with alternative transportation programs that allow students to access off campus commitments and resources such as Service Learning or employment.

⁷ University Corporation at Monterey Bay Student Housing Policy 410-001-A
https://gallery.mailchimp.com/3a9bc2d0b4b7b35594002815a/files/5d12d933-02a5-4666-b3d8-7f8a22c6f50c/410_001A_Student_Housing_Policy2_draft_1_.pdf

2. 90% of International Program students will live on-campus

Rationale:

- **Precedent** – International Students (IS) have generally been guaranteed on-campus housing if they apply by posted deadlines. As of the fall of 2017, approximately 87%⁸ of IS enrolled at CSUMB already lived on campus.
- **International Programs housing goal:** International Programs has a goal to house 90% of full time undergraduate IS on campus.
- **Response to the housing crisis:** Acquiring off-campus housing can be especially challenging for IS living abroad, due to limited financial resources, language or cultural barriers, and lack of knowledge of the Monterey area.
- **Community:** Living on campus provides a built-in community with target resources close at hand, which help IS start their CSUMB career off on the right footing.
- **TDM programs address transportation challenges:** IS typically do not have access to an automobile once they arrive in the area. Living on campus provides access to campus TDM programs to meet their needs.

3. All freshman and sophomore student residents will be prohibited from bringing personal automobiles and motor vehicles to campus, and from purchasing parking permits.

Rationale:

- **TDM definition:** Managing demand is about providing travelers, regardless of whether they drive alone, with travel choices, such as work location, route, time of travel and mode. In the broadest sense, demand management is defined as providing travelers with effective choices to improve travel reliability.⁹
TDM requirement: The City of Marina versus the Board of Trustees of the California State University Stipulation to Discharge Preemptory Writ of Mandate, (9/14/09) requires CSUMB to implement TDM programs to reduce campus generated offsite vehicle trips.

⁸ Email from Brian Childs, Director of International Student and Scholar Services on 07/16/2018

⁹ US Department of Transportation – Organizing and Planning for Operations - https://ops.fhwa.dot.gov/plan4ops/trans_demand.htm

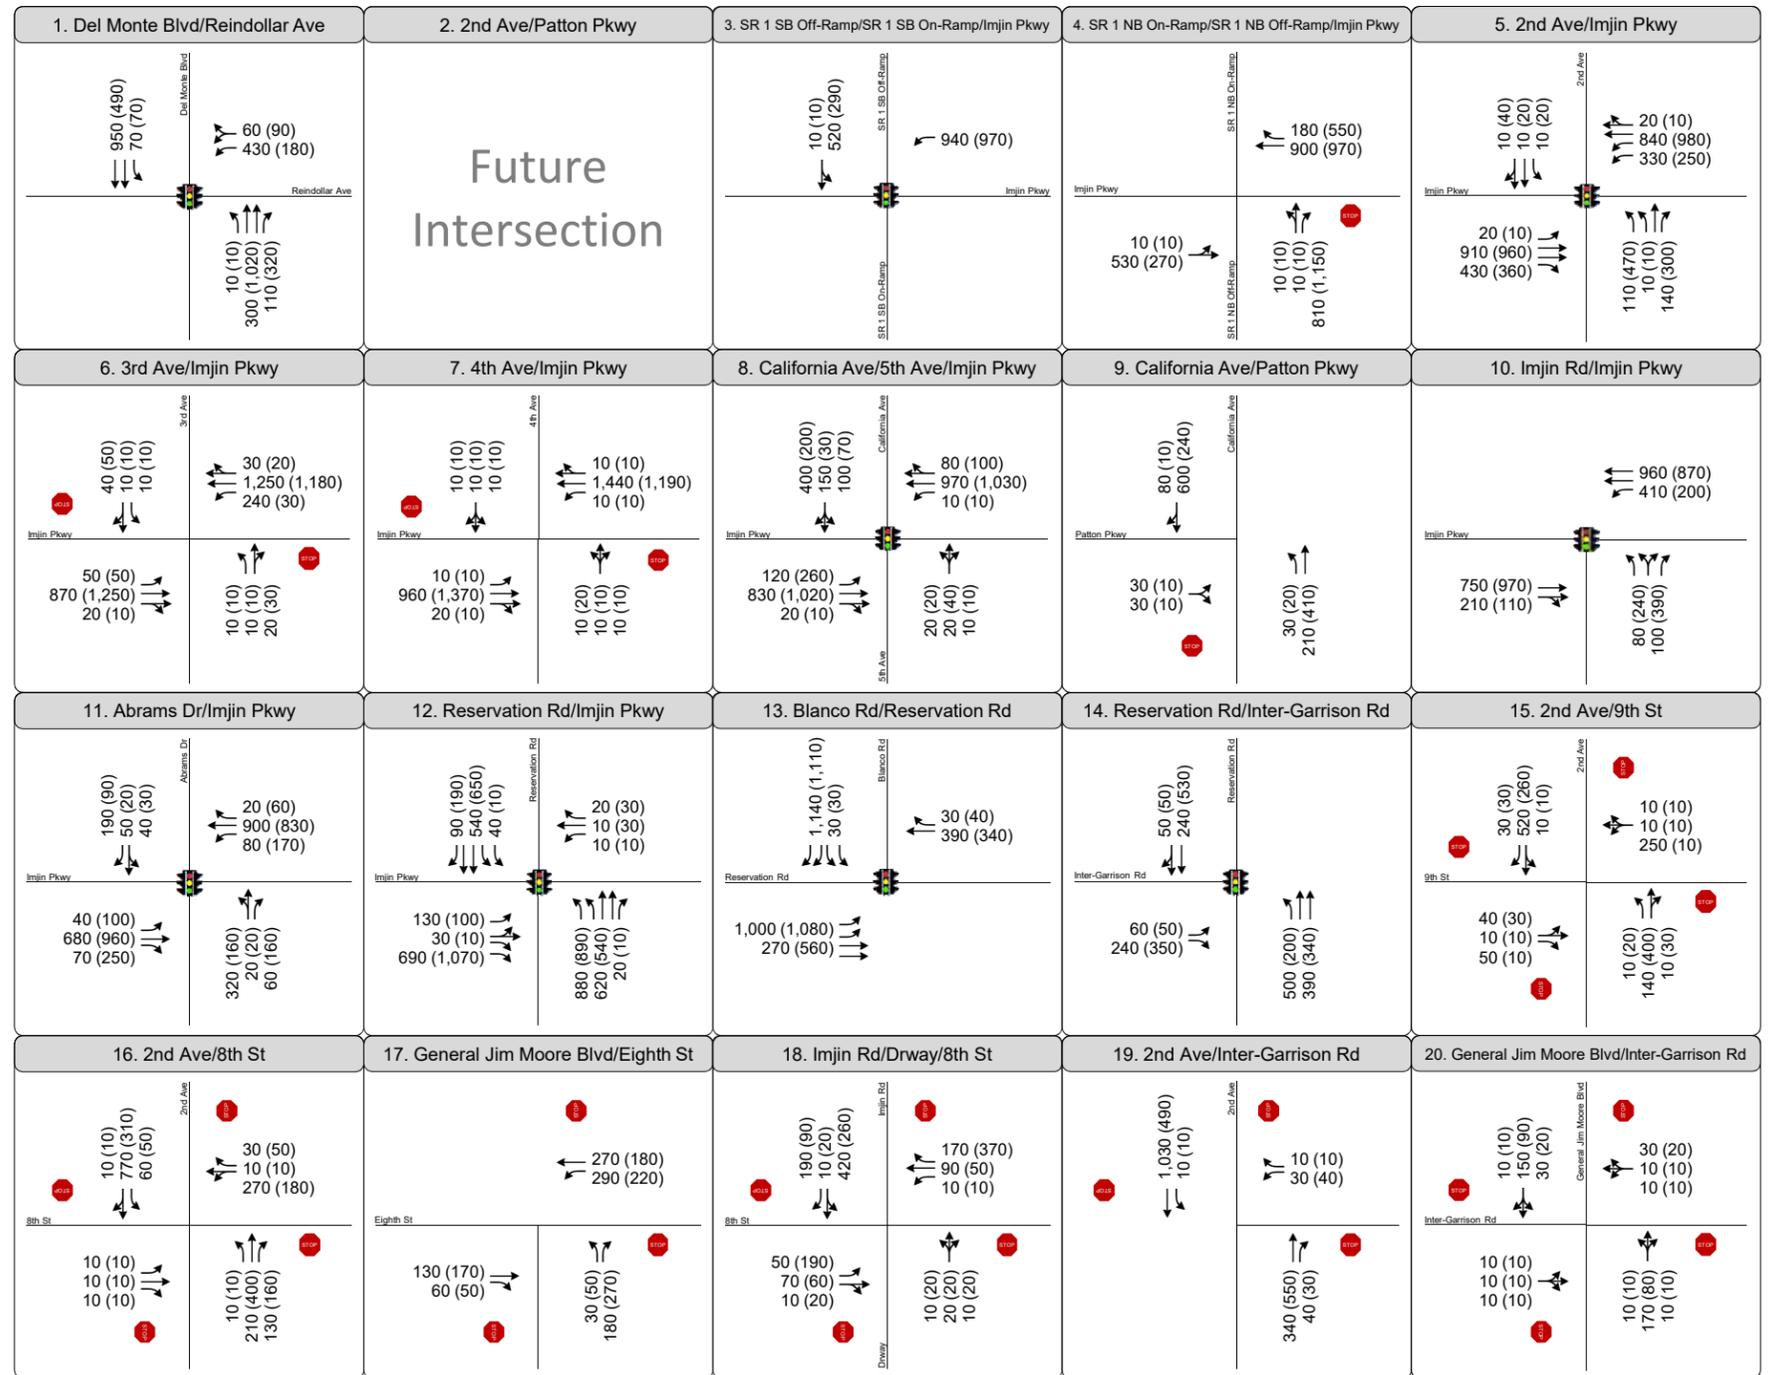

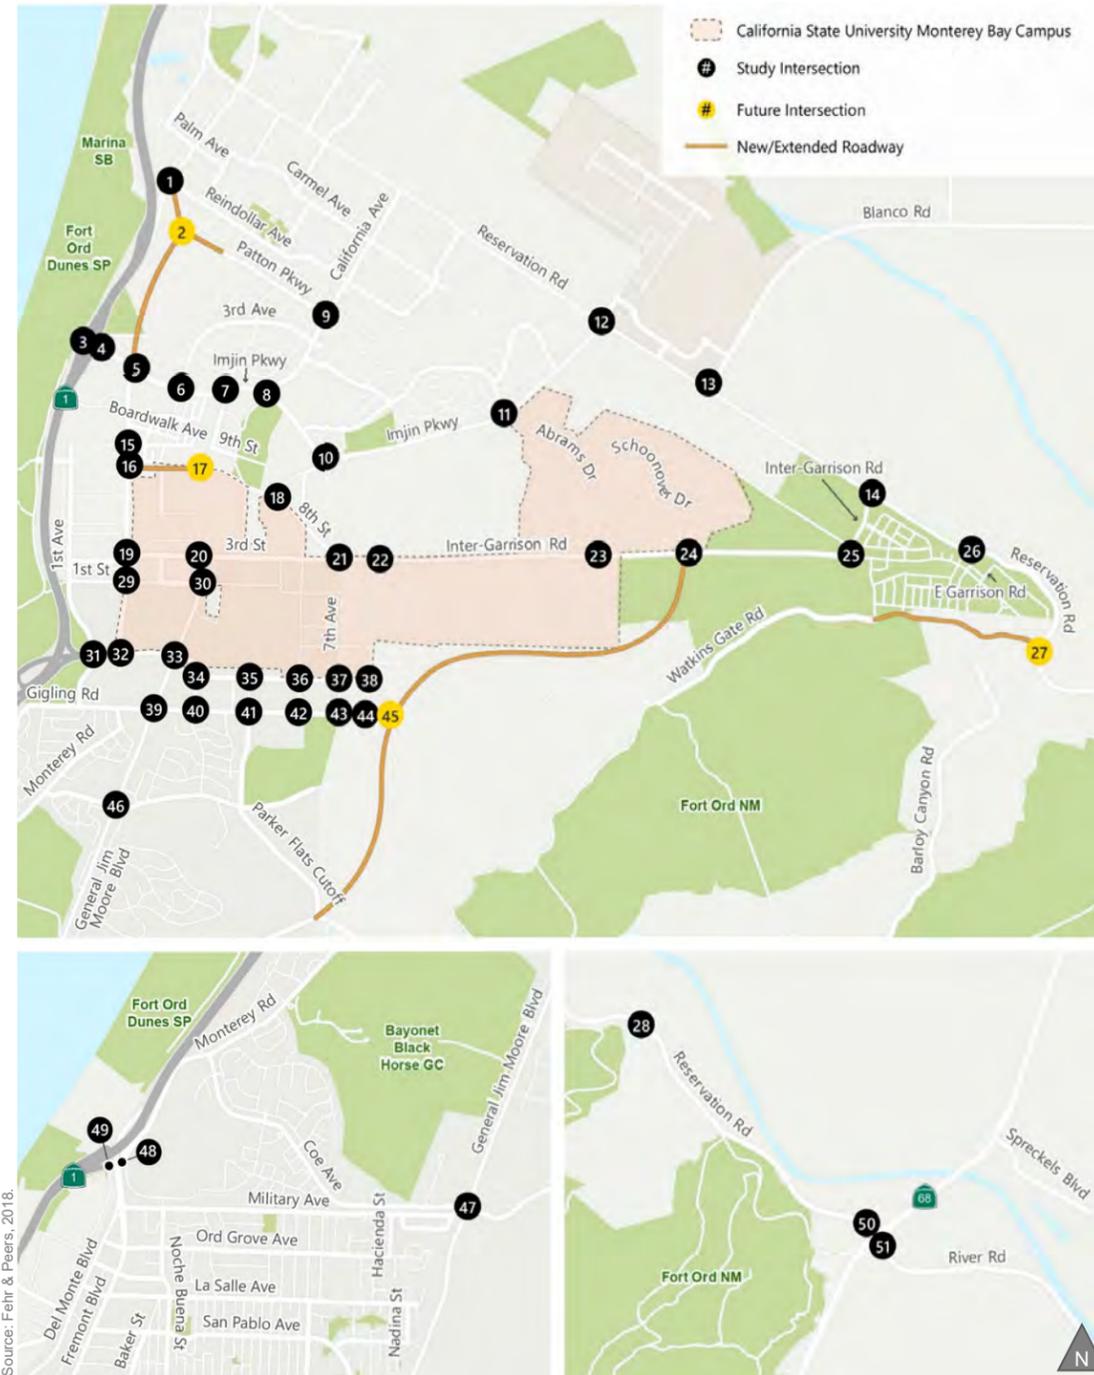

- **Cost effectiveness:** TDM programs can be more cost effective¹⁰ than increasing parking facilities.
- **Parking permit TDM strategy:** Parking permits encourage driving and do not incentivize sustainable travel modes. Parking management (restrictions, locations and pricing) is a TDM strategy that can reduce on- and off-campus traffic by requiring or encouraging people to choose other transportation modes (ride-share, car-share, bike-share, scooter-share, etc.). As the presence and visibility of sustainable transportation modes increase, so will the adoption of these programs as the primary modes of transportation.
- **Equity:** Resident students do not require a car to fulfill their academic commitments. Parking spaces should be made available to commuter students, staff and faculty, those with a disability or documented exemption/waiver from the parking permit guidelines requirements.
- **Land use, transportation and safety strategy:** The draft 2020 Master Plan places new buildings on existing centrally located parking lots reallocating space previously meant for car storage, to use by people in support of their academic success (academic buildings, pathways, gathering spaces areas etc.). Utilizing existing parking quantities efficiently throughout the buildout of the campus Master Plan will allow the campus to develop a car-free and safer central campus for walking and biking and protect our natural open spaces from being developed.

EXISTING WITH PROJECT INTERSECTION LEVELS OF SERVICE

The results of the LOS calculations indicate many of the study intersections will operate at levels of service meeting the applicable local jurisdiction’s LOS threshold under Existing with Project Conditions.

Intersections that exceed the applicable LOS thresholds are:

- Int 3. SR 1 Southbound Ramps and Imjin Parkway (AM peak hour)
- Int 4. SR 1 Northbound Ramps and Imjin Parkway (AM and PM peak hour)
- Int 6. Third Avenue and Imjin Parkway (AM peak hour)
- Int 7. Fourth Avenue and Imjin Parkway (AM and PM peak hour)
- Int 15. Second Avenue and Ninth Street (AM peak hour)
- Int 16. Second Avenue and Eighth Street (AM peak hour)
- Int 19. Second Avenue and Inter-Garrison Road (AM peak hour)
- Int 22. Eighth Avenue and Inter-Garrison Road (AM and PM peak hour)
- Int 23. Abrams Drive and Inter-Garrison Road (AM and PM peak hour)
- Int 24. Schoonover Road and Inter-Garrison Road (AM peak hour)
- Int 29. Second Avenue and Divarty Street (AM and PM peak hour)
- Int 40. Malmedy Road and Gigling Road (AM and PM peak hour)
- Int 41. Parker Flatts Cut Off Road and Gigling Road (AM and PM peak hour)
- Int 42. Sixth Avenue and Gigling Road (AM and PM peak hour)
- Int 44. Eighth Avenue and Gigling Road (AM peak hour)
- Int 47. General Jim Moore Boulevard and Coe Avenue (AM peak hour)
- Int 48. Fremont Boulevard - Southbound SR 1 Off-Ramp and Monterey Road (AM peak hour)

Notes: **Bold text** indicates intersection operates at unacceptable level of service. **Bold and highlighted text** indicates an intersection deficiency when the addition of Project traffic degrades the operations from acceptable level of service to unacceptable level of service; or when the addition of Project traffic further exacerbates unacceptable operations.

SSS = Side Street Stop Controlled, AWSC = All Way Stop Controlled, Signalized = Signalized intersection

1. Intersection jurisdiction and associated LOS threshold applied.
 - i. City of Marina = M
 - ii. City of Seaside = S
 - iii. California State University Monterey Bay = CSUMB
 - iv. Monterey County = MC
 - v. Caltrans = Cal
2. AM = morning peak hour, PM = evening peak hour.
3. Whole intersection weighted average control delay expressed in seconds per vehicle calculated using methods described in the 2010 *Highway Capacity Manual* for signalized intersections and all-way stop-controlled intersections. For side-street stop-controlled intersections, average control delay and total delay for the worst movement are reported as "average control delay (worst movement total delay)."
4. LOS = Level of Service. LOS calculations conducted using the Synchro 10 analysis software packages, which apply the methods described in the 2010 *Highway Capacity Manual*. For side-street stop-controlled intersections, average control LOS and total LOS for the worst movement are reported as "average control LOS (worst movement total LOS)."

Notes: **Bold text** indicates intersection operates at unacceptable level of service. **Bold and highlighted text** indicates an intersection deficiency when the addition of Project traffic degrades the operations from acceptable level of service to unacceptable level of service; or when the addition of Project traffic further exacerbates unacceptable operations.

1. SSS = Side Street Stop Controlled, AWSC = All Way Stop Controlled, Signalized = Signalized intersection
2. Intersection jurisdiction and associated LOS threshold applied.
 - i. City of Marina = M
 - ii. City of Seaside = S
 - iii. California State University Monterey Bay = CSUMB
 - iv. Monterey County = MC
 - v. Caltrans = Cal
3. AM = morning peak hour, PM = evening peak hour.
4. Whole intersection weighted average control delay expressed in seconds per vehicle calculated using methods described in the 2010 *Highway Capacity Manual* for signalized intersections and all-way stop-controlled intersections. For side-street stop-controlled intersections, average control delay and total delay for the worst movement are reported as "average control delay (worst movement total delay)."
5. LOS = Level of Service. LOS calculations conducted using the Synchro 10 analysis software packages, which apply the methods described in the 2010 *Highway Capacity Manual*. For side-street stop-controlled intersections, average control LOS and total LOS for the worst movement are reported as "average control LOS (worst movement total LOS)."

APPENDIX M: FREEWAY ANALYSIS

HCM 2010: Freeway Basic Segment

Basic Operational Analysis

| | |
|-------------|---|
| Project | CSUMB Master Plan EIR |
| Freeway | Southbound State Route 1 |
| Segment | SR 1 between Reservation Road and Del Monte Boulevard |
| Alternative | Existing |
| Time period | AM Peak Hour |

Flow Inputs and Adjustments

| | | |
|------------------------------------|-------|------|
| Volume, V | 2,705 | vph |
| Peak-hour factor, PHF | 0.76 | |
| Peak 15-min volume, v_{15} | 890 | veh |
| Trucks and buses | 4.7% | |
| Recreational vehicles | 0.0% | |
| Terrain type | Level | |
| Grade | | |
| Length | | mi |
| Trucks and buses PCE, E_T | 1.5 | |
| Recreational vehicle PCE, E_R | 1.2 | |
| Heavy vehicle adjustment, f_{HV} | 0.977 | |
| Driver population factor, f_p | 1.00 | |
| Flow rate, v_p | 3,642 | pcph |
| Number of lanes, N | 2 | |

Speed Inputs and Adjustments

| | | |
|--|------|----------|
| Lane width | 12.0 | ft |
| Right-side lateral clearance | >6 | ft |
| Total ramp density, TRD | 1.00 | ramps/mi |
| Lane width adjustment, f_{LW} | 0.0 | mph |
| Lateral clearance adjustment, f_{LC} | 0.0 | mph |
| TRD adjustment | 3.2 | mph |
| Calculated free-flow speed, FFS | 72.2 | mph |
| Measured free-flow speed, FFS | 65.0 | mph |
| Free-flow speed curve | 65 | mph |

Capacity Checks for Segments with Ramps

| | Actual | | Maximum | | Violation? |

| | | PM | No | | |
| 47 | General Jim Moore Boulevard and Coe Avenue | AM | Yes | Yes | Signalized |
| | | PM | Yes | Yes | |

Notes:

1. AM = morning peak hour, PM = evening peak hour.
2. California MUTCD Section 4C.04: Signal Warrant #3 – Peak Hour Warrant completed for unsignalized intersections.
3. "N/A" indicated intersections that did not have an LOS below it's designated LOS threshold in the corresponding scenario. "Signalized" indicates that intersection improvement for the corresponding scenario was to signalize.

Bold text indicates unsignalized warrant is met.
